About me

12 years in design, including 6+ in UX and product design. I design products where mistakes are costly – in banking, healthcare, rail transport and security – from research to delivery, across web, iOS and Android. I lead teams, test solutions with users early and use GenAI in my design process.

Work experience

05.2024 —
present

ING Bank Śląski · Web · iOS · Android

UX Expert – Interaction Design

Since 04.2025 in the central Business Banking design team; previously in Cash Management (card and credit processes for businesses).

Multi-currency accounts for businesses (2026): I

designed the entire application – replacing three separate processes (account, card, FX consents) with one journey, because clients want to pay a foreign partner, not just open an account. A clickable HTML prototype built with AI let developers start in parallel and cut delivery by about a month; 15 user sessions. Around 100 new accounts a month before any marketing campaign; the offer grew to 11 currencies.

BLIK for Business (phone transfers for businesses):

sending and receiving transfers in one project, released in two stages (2025 and 2026). 4,000+ companies activated the service in the first month; PLN 1M+ in transactions in the first week; nominated and distinguished in the Liderzy Bankowości 2025 awards. ING became the first bank in Poland to offer businesses the full functionality.

BLIK – phone number re-linking: in

30 moderated sessions we compared communication variants for moving a phone number from a personal to a business account; the winning variant shipped to production.

Success metrics: I define metrics with the business that combine adoption with qualitative signals from users.

Cards and credit: research with business clients turned into simpler card and credit journeys – with higher usability and conversion.

GenAI: an assistant for business banking and the bank's AI adoption strategy.

Research and workshops: I run them also for complex back-office systems.

Education

Master of Arts (New Media Art)

Polish-Japanese Academy of Information Technology, Warsaw
2020 – 2024

Google UX Design Professional Certificate

Google
2024

Umiejętności Jutra 3.0 (Skills of Tomorrow)

Google & SGH Warsaw School of Economics
2026

Tools

Skills

Product Design (web, iOS, Android)
Research and usability testing
Prototyping (Figma, ProtoPie, HTML/JS)
Design systems
AI systems design
Strategic Design Thinking
Stakeholder Management
Workshop facilitation (Design Sprints)

01.2023 —
12.2023

New Security Systems / REID · R&D grant project · Web · on-premise

Lead UX & UI Designer

Led a team of 4. A biometric re-identification system (face / gait / clothing) for critical infrastructure.

Clients: LOT, Rossmann.

ROI and delivery: 20% ROI in the first 6 months; from kickoff to client deployment in 60 days – faster than scheduled.

Operator trust: 97% of operators trusted the new identification method in acceptance tests, because a human always makes the final decision (human-in-the-loop).

Design system from scratch: 32 sprints and 180 days of iteration without design debt.

01.2023 —
07.2023

TabBox · part-time · iOS · Android

Lead Product Designer

Led a team of 3. A smart pill dispenser for seniors and people with dementia, plus an app for caregivers – from concept to mass production.

Results: 89% of surveyed users reported more regular medication intake; 5,000+ users in 2 months; +43% sales enquiries.

Market entry: mass-production contract 8 weeks after launch; pilot sales in pharmacy chains.

04.2021 —
12.2022

Infracert | VTDA · R&D grant project · iOS · Android · tablet

Lead UX & UI Designer

I led the design of a train driver assistance system – architecture and UI – in a pilot with several rail operators in Central and Eastern Europe.

Safety: –20% incident risk in a 6-month pilot and –5% accidents across all operators in the pilot – thanks to a new alert hierarchy.

In-cab interface: 120+ screens designed so as not to pull the driver's eyes away from the track.

Delivery: first units, system testing and certification with industry partners.

Projects and earlier experience

01.2024 —
09.2024

GreenGo · Hack the Climate · PFR · iOS · Android

Lead UX & UI Designer

A mobile app encouraging Rzeszów residents to choose green transport, with gamification. Designed with the City Hall based on qualitative research.

Result: Polish Development Fund (PFR) distinction; in the research group +36% interest in ecology and –23% car journeys.

Scope: information architecture, UI and visual identity; delivery-ready on schedule.

01.2023 —
07.2023

PGZ Stocznia Wojenna · PFR · Web · on-premise

Lead Product Designer

A neural-network-based maritime anomaly detection system, designed for the defence sector to the contractor's strict requirements.

Operational deployment: system architecture and UI adapted to field conditions – full deployment at the contractor.

External validation: qualified for the IDA Bootcamp programme.

Data visualisation: neural network output presented so that operators recognise anomalies instantly in critical conditions.

2014 —
2021

Freelance · R&B Studio · in-house

Product Designer · Graphic Designer · Video Editor

Seven years with agencies and direct clients: visual identities, marketing communication, video editing and first product projects.

Range of disciplines: branding, layout, motion and editing – a foundation for designing consistent digital ecosystems.
